Swat the Fly.

As a means of saving the babies of Chicago the health department and the child welfare societies of that city entered today upon a systematic crusade against the fly pest, setting an example for other cities of the country. The Lake Forest League declares that "recent scientific experiments have proved that our common and prevalent fly is a dangerous con-veyor of typhoid fever and tuber-

culosis."
Attention is called to the known methods of exterminating the pests, and adds that "every per-son who values the health of his family and of the community is asked to do his share upon his own premises." The most effective method, it is stated, is to 'destroy the flies before they are hatched. A hint to Washington.
